Portfolio: rukmini6300.github.io/portfoilo-viteReact | GitHub: github.com/rukmini6300

PROFESSIONAL SUMMARY

Frontend Developer with 4+ years of experience building scalable, high-performance web applications using React.js, TypeScript and modern JavaScript (ES6+). Strong expertise in reusable component architecture, responsive and cross-browser UI development, and state management with Redux Toolkit and Context API. Experienced in REST API integration, frontend performance optimization and Agile delivery alongside UI/UX, product and backend teams. Uses AI-assisted development tools (Claude AI, OpenAI Codex) to speed up coding, refactoring, debugging and code reviews while maintaining high code quality.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frameworks & Libraries:** React.js, React Hooks, Redux, Redux Toolkit, Context API
- **UI & Styling:** Material UI, Ant Design, Tailwind CSS, SASS/SCSS, Styled Components, Responsive Design, Cross-browser Compatibility
- **APIs & Integration:** RESTful APIs, JSON, Axios, Fetch API, Node.js (basics)
- **Performance:** Code Splitting, Lazy Loading, Memoization (React.memo, useMemo, useCallback), Bundle Optimization
- **Build Tools:** Webpack, Vite, Babel, npm, Yarn, ESLint, Prettier
- **AI Tools:** Claude AI (Claude Code), OpenAI Codex, Prompt Engineering for code generation, refactoring and debugging
- **DevOps & Deployment:** Git, GitHub, GitLab, GitHub Actions (CI/CD), Vercel, Netlify
- **Tools & Methodologies:** VS Code, React Developer Tools, Chrome DevTools, Git Extensions, OpenProject, Linux (basics), Agile/Scrum

PROFESSIONAL EXPERIENCE

Bitkemy Technologies Pvt. Ltd. **2022 – Present**

React Developer (Frontend)

Kagami Runtime – *UI engine for a no-code ERP platform*

- Developed a scalable UI engine for a no-code ERP platform using React.js and TypeScript, enabling users to create dynamic business applications without writing code.
- Built reusable, configurable React components that improved maintainability and accelerated feature delivery across multiple modules.
- Implemented complex, workflow-driven interfaces with dynamic UI rendering based on interconnected application data.
- Improved frontend performance through memoization, code splitting, lazy loading and optimized rendering strategies, reducing unnecessary re-renders.
- Integrated RESTful APIs and implemented real-time UI updates for responsive and reliable user interactions.

Kagami Studio – *Web-based ERP application builder*

- Developed a web-based ERP builder with intuitive navigation and responsive UI for non-technical users.
- Designed a consistent, scalable UI component system using React.js, Redux Toolkit and Ant Design.
- Built interfaces to manage hierarchical and relationship-driven data structures, improving usability and discoverability.
- Participated in frontend architecture discussions, code reviews and sprint planning in an Agile/Scrum team.
- Maintained clean, modular and well-documented code following scalable frontend engineering best practices.

AI-Assisted Development – *Kagami Runtime & Kagami Studio*

- Used Claude AI (Claude Code) and OpenAI Codex to accelerate component scaffolding, refactoring, debugging and documentation, improving development speed.
- Applied AI-assisted code reviews and prompt engineering to identify bugs early and keep code consistent with team standards, validating all generated code before merge.

EDUCATION

Master of Computer Applications (MCA) **2019 – 2021**

Andhra University

CERTIFICATIONS

- Web Development – Udemy
